# Simple layout with text only

Unordered list:

- Bullet text

Ordered list:

- ① Collect underpants
- ② ???
- ③ Profit!

## Fenced divs

In pandoc, a Div starts with a fence containing at least three consecutive colons plus some attributes.

```
::: columns  
:::: {.column width=50%}
```

This column takes up half the space:

- Bullet text

```
::::
```

```
::::: column  
![the other half can be an image](./leaves.jpg){height=50%}  
:::::  
:::
```

# Two column layout

This column takes up half the space:

- Bullet text

Figure 1: the other half can be an image

- This is a slide without title.

## Full slide image

To create a full size image, use `\fullslideimage{image.jpg}`

- This custom LaTeX command is defined in `texheader.tex` which we pass to Pandoc with the `--include-in-header` option.
- An image with 16:9 aspect ratio is required! To crop an image with ImageMagick , use:

```
convert in.jpg -gravity center -crop 16:9 out.jpg
```

# Some code

```
def foo():
    a = 10
    return 1

cars = ['ford', 'mercedes', 'bmw']
cars.reverse()

cars.count(cars)
```

# Statement

# “Notable quote”

This slide looks good without a title

# **100%**

Fact information

# Multiple pictures
